

The software delivery platform built for Higher Ed

AppsAnywhere is an app store-style platform that gives students access to all the software they need.

It provides Higher Ed IT a way to virtualize and deliver all your software from one place to any device, including Windows, Mac and Chromebooks, while meeting key strategic IT initiatives such as Bring Your Own Device (BYOD).

AppsAnywhere has improved the experience of more than 2 million students worldwide, by making software available on any device, on-demand, on and off campus, at a fraction of the price of traditional VDI solutions.

Be a super-cool IT department

Deliver a better IT service to all students

Provide equitable access to all your academic software apps on-demand, on and off campus, and improve the student experience on any device.

Repurpose dedicated PC labs and enable open-access learning areas

Universities across the globe struggle with supporting their labs. AppsAnywhere gives IT a way to deliver any app to any lab across campus. Enable open-access learning areas and let students choose where and when they get their work done.

Enable key strategic initiatives like BYOD

Students want access to their academic resources on-demand, wherever they are and whenever they need them. Deliver university-licensed software apps to both managed and BYO devices, including Windows, macOS and Chromebooks.

Reduce, replace or right-size existing VDI environments

VDI can cost universities millions of dollars. Reduce the need for VDI by delivering virtualized apps on demand to any device across campus and give students the user experience they expect.

Cut the time and cost of imaging, packaging and delivering apps

Imaging labs and machines is a time-consuming process, and not a good use of anyone's time. Deliver virtualized apps to any device on-demand and spend more time on IT projects that matter.

An awesome student experience

All academic apps in one place. Anywhere, anytime.

Provide equitable access to academic software for all students on any device. Deliver 100% of apps from a single centralized platform, whether they're installed, virtualized, SaaS, web or remote apps.

Provide flexible access to academic apps, even off campus!

Most students bring a laptop to university or college with them. And more often than not, those devices are high-powered monsters more than capable of running their academic apps. Enable BYOD and give them access to university-licensed software wherever they are.

Apps that look, feel and act as if they're installed

Unlike complex VDI environments, AppsAnywhere's virtualization technology means that apps run at the same speed as if they were fully installed locally. That means you can deliver graphics-intensive software without needing an expensive server infrastructure to support it!
